

BACK SUPPORT SYSTEM

ABSTRACT OF THE DISCLOSURE

A back support system that is designed to form the back of a chair. The back support system has a frontal surface on which is mounted several sets of inflatable bladders. The back support system is to be tiltable about a transverse axis toward and away from the user's back. The back support system also includes bolsters located at each side of the back support system with each bolster to be pivotable toward and away from the lateral edge of the user's back. The inflatable bladders are positioned to contact the different muscle groups of the back with no inflatable bladder located to apply pressure directly to the spine of a human user.
